

## New mobile phone ticket- and check-in service for airlines

Implementing mobile ticketing and providing direct boarding significantly improve customer service and increase customer convenience.

# Gavitec AG - mobile digit is developing a new ticket- and check-in service system to allow people using their mobile phone as a check-in instrument *OR* as a web check-in tool in combination with the web-check-in.

## Mobile check-in software application

To use this check-in software application, passengers can register at the airline-provided Internet site and download the Gavitec-check-in-software application. This software enables them to receive live and interactive seat maps on their mobile phone and to make flight bookings, even a mobile check-in would be possible.

## Web check-in application with mobile boarding-pass

To use the web-check-in application, passengers will receive a 2D code (Data Matrix) on their mobile phone after check-in via Internet. No software is necessary. It will be possible to scan a code e. g. from the airline-confirmation-form. At the airport's check-in counter or self-service-kiosk this code is read by the Gavitec scanner.

## Ticket redemption at airports

Passengers can quickly and easily check-in 24 hours prior to departure with their mobile phones and then print a boarding-pass – simply by using Gavitec scanners. Once a flight is booked, the ticket transmission will be effected in form of a 2D code (Data Matrix) via SMS to the passengers mobile phone. This code (the mobile airline ticket) will now be read by Gavitec scanner which will convert the code into a boarding-pass and directly print it.

## Project

We would very much appreciate to get in contact with you to get an overview of your special needs and expectations.

## Further applications

Gavitec scanners – EXIOTM and MD-20TM – can be integrated into many different systems and used for a wide variety of mobile phone-based CRM-solutions (ticket, coupon, loyalty card) and payment systems. For example, they can be used as a ticketing solution for events, cinema, transportation or facilities, as well as for mobile couponing applications by retail chains, fast food and other stores. There is no limit to the possible implementations of our products in direct marketing solutions. Please contact us so that we can help you to individually customize your preferred solution.
